

# Raven's™ Progressive Matrices (RPM) SA Normed Version

Author: John C. Raven

PURPOSE	To assess general mental ability from a non-verbal perspective
ADMINISTER TO	CPM: Children 5 years to 11 years SPM: Individuals 5 years and older, general population APM: Top 20% of the population
READING/EDUCATIONAL LEVEL	Not applicable
ADMINISTRATION TIME	CPM 15-30 minutes (36 items); SPM 15-45 minutes (60 items); APM 40-60 minutes (36 items)
SCORING OPTIONS	Hand-scoring, JvRO option coming soon!
PUBLICATION DATE	1998, 2011 (SA norms), 2017 (SA normed version published)
HPCSA	Submitted for classification
TRAINING	No accreditation training required
LANGUAGES	Instructions in English, Afrikaans, Sesotho, Zulu (Non-verbal assessment)
SA NORMS	CPM: 5 years 9 months to 12 years 8 months; SPM: adolescents' norms 11 years 9 months to 16 years 8 months. For Xhosa-speakers 6 years 9 months to 16 years 8 months. Adult norms from 18 years to 57 years APM: 18 years to 52 years

The Raven's™ Progressive Matrices (RPM) is the leading global non-verbal measure of mental ability. The RPM offers information about an individual's capacity for analysing and solving problems, abstract reasoning, and the ability to learn. It does this in a non-verbal format that is an especially important feature for an ethnically diverse population. For many years the Matrices have found wide application in numerous research studies. Their strong theoretical background, lengthy citation count and application across multiple language, ethnic and cultural groups make them ideal tools for investigations requiring measurements of cognitive abilities in a wide range of organisational, educational and clinical settings.

The test offers three progressively more difficult forms intended for different populations. Items on all forms ask the examinee to identify the missing component in a series of figural patterns. The test can be individually or group administered. The three forms are: Coloured Progressive Matrices™ (CPM), Standard Progressive Matrices™ (SPM), and Advanced Progressive Matrices™ (APM). All three forms measure the individual's clear-thinking ability.

The items on the Raven's CPM are arranged to assess the chief cognitive processes of which children under 11 years of age, are usually capable. The Raven's CPM items are arranged to assess cognitive development up to the stage when a person is sufficiently able to reason by analogy and adopt this way of thinking as a consistent method of inference.

The Raven's SPM is a test of observation skills. It is suitable for the general population – individuals with average intellectual ability.

The Raven's APM measures high-level observation skills and intellectual capacity. This test is designed to differentiate between people at the high end of intellectual ability. When administered under timed conditions, the APM can also be used to assess intellectual efficiency – quick and accurate high-level intellectual work.

The RPM produces a single raw score as well as percentile rank to indicate the candidate's educative ability or the ability to make sense of complex situations, compared to a norm group. Scores are relatively unaffected by linguistic and ethnic background and can be used as a good predictor of success in an educational context for both children and adults. In clinical settings the reliability of the measures and lack of bias makes them ideal tools in neuropsychological assessment, working with elderly people and many clinical groups whose particular needs make the demands of more traditional cognitive testing unrealistic.

## AREAS OF APPLICATION

The Raven's CPM is useful in:

- educational settings to identify students with exceptional cognitive abilities and logical reasoning skills.
- assessing elderly persons and mentally and physically impaired persons.

The Raven's SPM score can be used as:

- an indication of a candidate's potential for success in professional, management and high-level technical positions that require clear thinking, problem identification, holistic situation assessment, and monitoring of tentative solutions for consistency with all available information.
- scores can also be used for developmental purposes in occupational and educational settings.

The Raven's APM can be used in the following settings:

- Indication of a candidate's potential for success in high-level technical, professional, and executive positions that require high levels of clear and accurate thinking, problem identification, holistic situation assessment, and monitoring of tentative solutions for consistency with all available information.
- Developmental purposes in occupational and advanced educational settings.

## REPORT OPTION

The Raven's matrices are currently hand-scored. Online option coming soon!

## SOUTH AFRICAN RESEARCH

JvR Psychometrics have normed the RPM for South African use. The assessment is now printed locally.
